

I want from you to make 3 different version of main page. Each version put into Prototypes pages, first idea into Prototype 1, second idea into Prototype 2 and third idea into Prototype 3. I want from you to use libraries from below list and if you see a reason than extend this list and use necessities components. I want from you to do your best and prepare 3 animated, fancy, modern, business websites with animations in background while user scroll page. Be best react senior specialist and top level designer of resume on websites
